

Product Specification

Model: BC-LIR-2032 Lithium Ion Button Battery Charger

1. Main Features

Suitable for 2025 and 2032 rechargeable lithium-ion button batteries, used in electronic notebooks, calculators, hearing aids, toys, etc.

Can charge a single battery independently or two batteries simultaneously.

The red light flashing indicates the battery is being charged, while the green light indicates the power indicator or the battery has finished charging.

Wide input voltage range for AC power input; attractive appearance and compact design, easy to carry.

2. Technical Specifications

Input: AC100V-240V 50Hz/60Hz 3W

Output: DC 2 x 4.2V 20mA

Operating temperature: 0°C-40°C

3. Charging Method

Remove the plug from the bottom of the charger and insert it into a power outlet, then turn on the power. The green indicator light will light up. According to the positive and negative polarity diagram on

the surface of the charger and the positive and negative polarity markings of the rechargeable button battery, insert the battery. The red light below the battery will flash, indicating that it has entered the charging state. When the green light turns on, it indicates that the battery has been fully charged. Remove the charger from the outlet and take out the battery for use.
