Description

The devices in this series consist of four independent single or dual supply voltage comparators on a single monolithic substrate. The common mode input voltage range includes ground even when operated from a single supply, and the low power supply current drain makes these comparators suitable for battery operation. These types were designed to directly interface with TTL and CMOS.

Types CA139A, CA239A, and CA339A have all the features and characteristics of their prototype counterparts CA139, CA239, and CA339 plus an even lower input offset voltage characteristic. All the SOIC parts are available on tape and reel. Replace the M suffix in the part number with M96 when ordering (e.g. CA0339AM96). The CA339 is also available in chip form (H suffix).

NOTES:

4. Ambient Temperature (T_A) applicable over operating temperature range as shown below.
CA139, CA139A = -55°C to 125°C; CA239, CA239A = -25°C to 85°C; CA339, CA339A, LM339, LM339A = 0°C to 70°C; LM2901, LM3302 = -40°C to 85°C.
5. The comparator will provide a proper output state even if the positive swing of the inputs exceeds the power supply voltage level, if the other input remains within the common mode voltage range. The low input voltage state must not be less than -0.3V (or 0.3V below the magnitude of the negative power supply, if used).
6. The upper end of the common mode voltage range is (V+) - 1.5V, but either or both inputs can go to +30V without damage.
