

Description

The μPD7227 intelligent dot-matrix LCD controller/driver is a peripheral device designed to interface most microprocessors with a wide variety of dot matrix LCDs. It can directly drive any multiplexed LCD organized as 8 rows by 40 columns, and is easily cascaded up to 16 rows and 280 columns. The μPD7227 is equipped with several hardware logic blocks, such as an 8-bit serial interface, ASCII character generator, 40 x 16 static RAM with full read/write capability, and an LCD timing controller; all of which reduce microprocessor system software requirements. The μPD7227 is manufactured with a single 5 V CMOS process, and is available in a space-saving 64-pin plastic flat package.
